PREFACE TO THE NINTH EDITION

William Boericke
1849-1929, US

In preparing the ninth edition of this work, I have followed the lines laid out for all the previous editions, namely, to present in a condensed form the homœopathic Materia Medica for practical use.

The book contains the well known verified characteristic symptoms of all our medicines besides other less important symptoms aiding the selection of the curative remedy, All the new medicines and essentials of the published clinical experience of the school have been added. In its present compact form it contains the maximum number of reliable Materia Medica facts in the minimum space.

I have tried to give a succinct resume of the symptomatology of every medicine used in Homœopathy, including also clinical suggestions of many drugs so far not yet based on provings, thus offering the opportunity to experiment with these and by future provings discover their distinctive use and so enlarging our armamentarium.

I am aware that there is a difference of opinion about the advisability of further introduction of remedies, especially of such as seem obsolete or to some minds illusory. But it is not for the compiler to leave out information about any substance that has received the clinical endorsement from a reliable source. Our Materia Medica must include all substances which have been proved and which have been used with apparent efficacy. It rests with the individual student to judge for himself the accuracy and, reliability of such observation. In this connection, I cannot forego to avail myself of the high authority of that master of Homœopathy, Dr. Constantine Hering, favoring the introduction of all remedies capable of producing reactions in the body that may guide to their medicinal employment. "Homœopathy is essentially not only many-sided but all-sided. She investigates the action of all substances, whether articles of diet, beverages, condiments, drugs or poisons. She investigates their action on the healthy, the sick, animals and plants. She gives; a new interpretation to that ancient, oft quoted saying of Paul, Prove all things––a new meaning, a new application that acts universally. Elimination of the useless may gradually take place with the growth of accurate physiological and pathological knowledge."

Again, imperfectly proved remedies necessitate the use of names of diseases at times instead of the component symptoms that alone are the legitimate guide to the choice of the curative remedy. Here, too, I have Hering as pioneer guide for the legitimacy of this method, which he also followed in his great work, the Guiding Symptoms. He said that he used the disease designations not for the

purpose of recommending the particular remedy for that disease, but to show the great variety of remedies that may be used for any form of disease when otherwise indicated. For the same reason I have included nosological terms in the symptomatology and Therapeutic Index, as this is a practical handbook for every-day service, and any aid for finding the curative remedy ought to be utilized. As Dr. J. Compton Burnett expresses it:

"The fact is we need any and every way of finding the right remedy; the simple simile, the simple symptomatic similimum and the farthest reach of all-the pathologic similimum, and I maintain that we are still well within the line- of Homœopathy that is expansive, progressive, science fostered and science fostering."

The dosage needs some apology. It is, of course, suggestive only; more often to be wholly disregarded. I have followed the lines of the earlier Homœopathists in this regard, and given what was then considered the usual range of potency, to which I have added my own experience and that of many observing practitioners. Every teacher of Materia Medica is constantly importuned by students to suggest the potency––something to start with at least.

The book is in no sense a treatise, and must not be considered or judged as such. It is as accurate and reliable a compilation and the fullest collection of verified Materia Medica facts and clinical suggestions as it is possible to obtain within the compass of the volume. It supplements every other work on Materia Medica, and if used as a ready reminder of the essential facts of our vast symptomatology and as an introduction to the larger books of reference and record of provings, it will fulfill its purpose and prove a useful aid to the student and general practitioner. As such it is again offered with much appreciation of past endorsement to his professional brethren.

I have been aided in seeing this edition through the press by the efficient help of Mr. F. O. Ernesty, who has lightened the labor of making the manuscript more acceptable to the printers, and I desire to express my hearty appreciation of this kind and helpful service.

ADRENALINUM

Adrenalin

An Internal Secretion of Suprarenal Glands

Adrenaline or Epinephrine, the active principle of the medulla of the suprarenal gland, (cortical secretion not as yet isolated), is employed as a chemical messenger in the regulation of the activities of the body; in fact, its presence is essential to the activity of the sympathetic nerve. Adrenaline action on any part is the same as stimulation of the sympathetic nerve endings thereto. Local application (1: 1,000 solution) to mucous membranes promptly induces transient ischemia, seen in a blanching, persisting several hours from conjunctival instillation. Its action is very prompt, efficient, evanescent, owing to rapid oxidation and therefore practically harmless, unless too frequently repeated, when atheroma and heart lesions––myocardial––in animals have been reported. Arteries, heart, supra-renal bodies and vaso-motor system are prominently affected. The main action of Adrenaline is stimulation of the sympathetic endings, notably the splanchnic area, causing constriction of the peripheral arterioles, with resulting rise in blood pressure. This is especially observed in stomach, intestines; less in uterus, skin; nil in brain and lungs. Furthermore, is noticed, slowing of pulse, (medullary vagus stimulation), and strengthening of heart beat (increased myocardial contractility), resembling Digitalis; increased glandular activity, glycosuria; depression of respiratory center; contraction of

muscular tissue of eye, uterus, vagina; relaxation of muscular tissue of stomach, intestines, bladder.
Uses.––Its chief therapeutic use depends on its vaso-constriction action; therefore a most powerful and prompt astringent and hæmostatic; and invaluable in checking capillary hæmorrhages, from all parts, where local or direct application is feasible: nose, ear, mouth, throat, larynx, stomach, rectum, uterus, bladder. Hæmorrhagic condition not due to defective coagulation of the blood. Complete bloodlessness, ischemia, may be induced with impunity. Locally, solutions (1: 10,000-1: 1,000) sprayed or applied on cotton have been very efficient in bloodless operations about the eye, nose, throat, and larynx.
Congestions of the ethmoid and sphenoid sinuses, also hay fever, have been markedly alleviated by warm spray of Adrenaline chloride, 1: 5,000. Here compare, Hepar 1x, which will start up secretions and so facilitate drainage. Werlhoff's disease, hypodermically, 1: 1,000. Externally, it has been used in neuritis, neuralgia, reflex pains, gout, rheumatism, as an ointment, 1-2 m of (1: 1,000) solution, along the nerve trunk at point of skin nearest its origin which could be reached (H. G. Carlton).
Therapeutically, Adrenaline has been suggested in acute congestion of lungs, Asthma, Grave's and Addison's diseases, arterio-sclerosis, chronic aortitis, angina pectoris, hæmophilia chlorosis, hay fever, serum rashes, acute urticaria, etc. Dr. P. Jousset reports success in treating, homeopathically, cases of angina and of aortitis, sub-acute and chronic, when Adrenaline has been prescribed per os and in infinitesimal dose. The symptom guiding to this is, Sensation of thoracic constriction with anguish. This, with vertigo, nausea and vomiting have been produced by the drug. Abdominal pain. Shock or heart failure during anæsthesia, as it causes very prompt rise of blood pressure by its action on nerve endings in the vessel wall.
Dose.––Hypodermically, 1-5 m (1: 1,000 solution, as chloride) diluted in water. Internally, 5-30m of 1: 1,000 solution.
Caution.––On account of its affinity for oxygen, the drug easily decomposes in watery and dilute acid solutions. The solution must be protected from air and light. It must not be too frequently repeated, owing to cardiac and arterial lesions. For homeopathic use 2x to 6x attenuation.

AESCULUS HIPPOCASTANUM

AGARICUS MUSCARIUS - AMANITA

Toad Stool-Bug Agaric

This fungus contains several toxic compounds, the best known of which is Muscarin. The symptoms of poisoning do not develop at once, usually twelve to fourteen hours elapse before the initial attack. There is no antidote, treatment, entirely symptomatic (Schneider). Agaricus acts as an intoxicant to the brain, producing more vertigo and delirium than alcohol, followed by profound sopor with lowered reflexes.
Jerking, twitching, trembling, and itching are strong indications. Incipient phthisis; is related to the tubercular diathesis, anæmia, chorea, twitching ceases during sleep. Various forms of neuralgia and spasmodic affections, and neurotic skin troubles are pictured in the symptomatology of this remedy. It corresponds to various forms of cerebral excitement rather than congestion. Thus, in delirium of fevers, alcoholism, etc. General paralysis. Sensation as if pierced by needles of ice. Sensitive to pressure and cold air. Violent bearing-down pains. Symptoms appear diagonally as right arm and left leg. Pains are accompanied by sensation of cold, numbness and tingling.
Mind.––Sings, talks, but does not answer. Loquacity. Aversion to work. Indifference. Fearlessness. Delirium characterized by singing, shouting, and muttering; rhymes and prophesies. Begins with paroxysm of yawning.

The provings bring out four phases of cerebral excitement.
1. Slight stimulation-shown by increased cheerfulness, courage, loquacity, exalted fancy.
2. More decided intoxication-great mental excitement and incoherent talking, immoderate gaity alternates with melancholy. Perception of relative size of objects is lost, takes long steps and jumps over small objects as if they were trunks of trees-a small hole appears as a frightful chasm, a spoonful of water an immense lake. Physical strength is increased, can lift heavy loads. With it much twitching.
3. Third stage produces a condition of furious or raging delirium, screaming, raving, wants to injure himself, etc.
4. Fourth stage-mental depression, languor, indifference, confusion, disinclination to work, etc. We do not get the active cerebral congestion of Belladonna, but a general nervous excitement such as is found in delirium tremens, delirium of fevers, etc.

renal; probably neurotic in origin, stimulating the terminal fibers of the secretory nerves of all these structures, hence salivation, lachrymation and excessive perspiration. Atropin exactly opposes Muscarine. Resembles Pilocarpin in action). Amanita vernus-spring mushroom-a variety of Agar Phalloides-Death cup-active principle is Phallin, active like Muscarine. Amanita phalloides (Death Cup-Deadly Agaric). The poison is a toxalbumin, resembling the poison in the rattle snake and the poison excreted by the cholera and diphtheria germs. It acts on the red blood corpuscles, dissolving them so that blood escapes into the alimentary canal and the whole system is drained. The amount of this toxic principle is small, even handling of specimens and breathing of spores affects some people unpleasantly. The poison is slow in development. Even 12 to 20 hours after taking it the patient feels all right, but vertigo violent choleraic symptoms with rapid loss of strength with death the second or third day, preceded by stupor and spasms. Fatty degeneration of liver, heart and kidneys, hæmorrhages in lungs, pleura and skin (Dr. J. Schier). Vomiting and purging. Continuous urging to stool, but no gastric, abdominal or rectal pain. AURUM METALLICUM

Gold

Given full play, Aurum develops in the organism, by attacking the blood, glands, and bone, conditions bearing striking resemblance to mercurial and syphilitic infections; and it is just for such deteriorations of the bodily fluids and alterations in the tissues, that Aurum assumes great importance as a remedy. Like the victim of syphilis, mental states of great depression are produced by it. Hopeless, despondent, and great desire to commit suicide. Every opportunity is sought for

self-destruction. Exostosis, caries, nightly bone-pains, especially cranial, nasal, and palatine. Glands swollen in scrofulous subjects. Palpitation and congestions. BACILLINUM BURNETT

Maceration of a Typical Tuberculous Lung introduced by Dr. Burnett

Has been employed successfully in the treatment of tuberculosis; its good effects seen in the change of the sputum, which becomes decreased and more aerated and less purulent. Many forms of chronic non-tubercular disease are influenced favorably by Bacillinum, especially when bronchorrhœa and dyspnœa are present. Respiratory pyorrhea. The patient expectorates less.
Bacillinum is especially indicated for lungs of old people, with chronic catarrhal condition and enfeebled pulmonary circulation, attacks of suffocation at night with difficult cough. Suffocative catarrh. Tubercular meningitis. Favors falling off of tartar of teeth. Constant disposition to take cold.

This muco-purulent expectoration of bronchitic patients is equally poly-bacillary; it is a mixture of diverse species and hence Bacillinum is truly indicated (Cartier). Often relieves congestion of the lungs, thus paving way for other remedies in Tuberculosis.
Skin.--Ringworm; pityriasis. Eczema of eyelids. Glands of neck enlarged and tender.

Modalities.––Worse, night and early morning; cold air.
Relationship.––Antimon iod; Lach; Arsenic iod; Myosotis. Levico, 5-10 drops, follows as an intercurrent where much debility is present (Burnett).

Compare: Its effects seem to be identical to that of Koch's Tuberculinum. Both are useful in the tubercular diathesis before phthisis had developed. In the early stages of tubercular disease of glands, joints, skin and bones. Psorinum. Seems to be its chronic equivalent. Bacillin testium acts especially on lower half of the body.
Dose.––The does is important. Should not be given below the thirtieth and not repeated frequently. One dose a week often sufficient to bring about reaction. It is rapid in action, and good results ought to be seen, otherwise there is no need of repetition.

Hahnemann says: "The action of this substance is very puzzling and difficult of investigation, even in the healthy organism because its primary action, more frequently than with any other remedy, alternates and becomes intermixed with the vital reactions (after effects) of the organism. On this account it is often

difficult to determine what belongs to the vital reactions of the body and what to the alternating effects due to the primary action of the camphor."

Marked diuretic effect, greater elimination of products of disassimilation, particularly urea. Tremor. Tuberculosis, chronic nephritis and carcinoma, lupus, etc, have been treated successfully with injections of Formic acid of a dilution corresponding to the 3d and 4th centesimal. In prescribing it for varicose veins, polypi, catarrh, Dr. J. H. Clarke orders an ounce or two of a solution of Formic acid in the proportion of one part of the acid to eleven of distilled water. Of this one teaspoonful is taken in a tablespoonful of water after food once or twice daily. Pain in aponeurosis and muscles of head, neck and shoulders before a snowstorm). Rhus; (Dulcam, Urtica and Juniperus contain Formic acid), Wood alcohol, when taken as a constituent of a beverage so common in these prohibition days, is not eliminated easily and is slowly converted into Formic acid, attacking the brain and causes death or blindness.
Dr. Sylwestrowicz of the Hering Research Laboratory of Hahnemann College, Philadelphia contributes his experience with Formic Acid, as follows:
"The best field for the formic acid treatment are cases of atypical gout. Under this

classification are to be mentioned disturbances in the muscles such as myositis, periostitic processes of the bones in form of doughy swellings, changes of the fascias such as Dupyutren's contraction, skin troubles such as chronic eczema, psoriasis and loss of hair, kidney disturbances such as subacute and chronic nephritis. In these cases formic acid in 12x and 30x, hypodermically 1 cc is indicated at intervals of 2-4 weeks. Eight till twelve days after the first injection an aggravation is often noticed.

In acute rheumatic fever and acute gonorrhœic arthritis formic acid 6x, every six days 1 cc, sometimes 12x in sensitive patients shows often splendid results abolishing the pains and preventing reoccurrence.

Chronic arthritis needs a special discussion. Clinical experiments of the Hering research Laboratory of the Hahnemann Medical College of Philadelphia on a great number of cases of arthritis with formic acid showed that it preferably acts on the ligaments, capsula and bursa of the joints. Such kind of cases respond very readily to treatment.

The prognosis depends to a large extent upon the etiology of the case. The most satisfactory cases are chronic arthritis in connection with gouty diathesis. Chronic arthritis following an attack of acute rheumatic fever shows also remarkable results although often pains of a neuralgic character persisting in certain spots are very stubborn. Finally chronic arthritis of traumatic nature can be cured by formic acid. In the latter case formic acid 6x showed quicker and better results than 12x or 30x which are indicated in the previous cases. In general the disappearance of the stiffness of the joint is the first sign of improvement. Then the pain and swelling cease gradually in 1-6 months time. The prognosis of the formic acid treatment is not so favorably in chronic arthritis in which deformans processes have already taken place on the articular surfaces. Such processes in the beginning can be checked completely, advanced cases frequently show an improvement. But there is always the possibility that this improvement is only temporary. This is particularly to be expected in the cases of the so-called arthritis deformans in which even the inflammations on the ligaments and capsula are of a very progressive character".

Potassium Permanganate for Morphine Poisoning.––Potassium permanganate is recognized as being the most effective chemical antidote in cases of morphine or opium poisoning, acting directly on the morphine and oxidizing it to less toxic substances. To be effective the permanganate must come in direct contact with the opium or morphine in the stomach; hypodermatic or intravenous injections are absolutely useless, as the salt would be decomposed by the blood serum at once. The approved treatment is administration of two to five grains of potassium permanganate in dilute aqueous solution as soon as possible after the poison is taken, this amounts to be increased if very large doses of the poison have been taken. Washing out the stomach with a quantity of 1 to 500 solution of permanganate is also recommended, using at least a pint of this solution either by a stomach pump or by enforced vomiting. Permang of Potash counteracts effects of alkaloids of many poisonous plants. Owing to its oxidizing powers if given before the alkaloid has been absorbed (Dr. Chestnut in Dept of Agriculture).

MAGNESIUM SULPHURICUM

Epsom Salt

The skin, urinary, and female symptoms are most marked. Epsom salt is one of the most active saline cathertics, operating with little pain or nausea, especially if pure. It has but little if any effect on intestinal peristalsis, its

action causing a rush of fluid into the intestine, which by producing a distention of the bowel produces evacuation. It causes little or no irritation in the intestine. In common with the other salines, it is the classical evacuant to be employed in connection with mercurials and anthelmintics and in cases of poisoning. Epsom salt usually acts within from one to two hours, more quickly if taken in hot water and in the morning before breakfast. The ordinary dose as a mild laxative is a heaping teaspoonful; as a cathartic, two to four teaspoonfuls. The taste may be improved, if necessary, by the addition of a little lemon juice and sugar.
Besides its chief use as a saline cathartic, magnesium sulphate is used to a considerable extent externally in saturated solution as an antiphlogistic and antipruritic in erysipelas, ivy poisoning, cellulitis and other local inflammations. Use on compresses saturated with solution.

NUX VOMICA

Poison-nut

Is the greatest of polychrests, because the bulk of its symptoms correspond in similarity with those of the commonest and most frequent of diseases. It is frequently the first remedy, indicated after much dosing, establishing a sort of equilibrium of forces and counteracting chronic effects.
Nux is pre-eminently the remedy for many of the conditions incident to modern life. The typical Nux patient is rather thin, spare, quick, active, nervous, and irritable. He does a good deal of mental work; has mental strains and leads a sedentary life, found in prolonged office work, overstudy, and close application to business, with its cares and anxieties. This indoor life and mental strain seeks

stimulants, coffee, wine, possibly in excess; or, again, he hopes to quiet his excitement, by indulging in the sedative effects of tobacco, if not really a victim, to the seductive drugs, like opium, etc. These things are associated with other indulgences; at table, he takes preferably rich and stimulating food; wine and women play their part to make him forget the close application of the day. Late hours are a consequence; a thick head, dyspepsia, and irritable temper are the next day's inheritance. Now he takes some cathartic, liver pills, or mineral water, and soon gets into the habit of taking these things, which still further complicate matters. Since these frailties are more yielded to by men than women. Nux is pre-eminently a male remedy. These conditions, produce an irritable, nervous system, hypersensitive and over-impressionable, which Nux will do much to soothe and calm. Broom

Spartium scoparium

Spartein sulphate increase the strength of the heart, slows it and reduces the blood pressure. It continues the good effects of Veratrum and Digitalis without any of the undesirable effects of either (Hinsdale).
The effect of spartein sulphate (the alkaloid of Broom) is to cause a lowering of the systolic and diastolic pressures of the provers. Sphygmograms also show a condition of lowered blood-pressure. It depresses the heart by poisonous action exerted on the myocardium and this, with the stimulating action of the drug upon the vagus, accounts for the lowered blood pressure and reduced pulse rate. It weakens the cardiac contraction. The total amount of urine is increased. The drug has, therefore, diuretic properties and is useful in dropsy.

Hypotension used palliatively in physiological dosage to combat arterial hypertension, arterio-sclerosis. SERUM ANGUILLAE

Eel Serum

The serum of the eel has a toxic action on the blood, rapidly destroying its globules. The presence of albumin and renal elements in the urine, the hemoglobinuria, the prolonged anuria (24 and 26 hours), together with the

results of the autopsy, plainly demonstrate its elective action on the kidneys. Secondarily, the liver and the heart are affected, and the alterations observed are those usually present in infectious diseases.

From all these facts it is easy to infer, a priori, the therapeutical indications of the serum of the eel. Whenever the kidney becomes acutely affected, either from cold or infection or intoxication, and the attack is characterized by oliguria, anuria and albuminuria, we will find the eel's serum eminently efficacious to re-establish diuresis, and in rapidly arresting albuminuria. When during the course of heart-disease, the kidney, previously working well, should suddenly become affected and its function inhibited; and when besides we observe cardiac irregularities and a marked state of asystolia, we may yet expect good results from this serum. But to determine here the choice of this remedy is not an easy matter. While digitalis presents in its indications, the well-known symptomatic trilogy: arterial hypertension oliguria and œdema; the serum of the eel seems better adapted to cases of hypertension and oliguria, without œdema. We should bear in mind that the elective action of the eel's serum is on the kidney, and I believe we can well assert that if digitalis is a cardiac, the eel's serum is a renal remedy. So far, at least, the clinical observations published seem to confirm this distinction. The serum of the eel has given very small results in attacks of asystolia; but it has been very efficacious in cardiac uræmia. There, where digitalis is powerless, the serum of the eel has put an end to the renal obstruction and produced an abundant diuresis. But its really specific indication seems to be for acute nephritis a frigori (Jousset)

Subacute nephritis. Heart diseases, in cases of failure of compensation and impending asytole. The experiments of Dr. Jousset have amply demonstrated the rapid hæmaturia, albuminuria and oliguria caused by it. In the presence of acute nephritis with threatening uræmia we should always think of this serum. Very efficacious in functional heart diseases. Mitral insufficiency, asystolia with or without œdema, dyspnœa and difficult urinary secretion.

Relationship.––Great analogy exists between eel serum and the venom of the Vipera.

Compare also: Pelias; Lachesis.

Dose.––Attenuations are made with glycerine or distilled water, the lower 1x to 3 in heart disease, the higher in sudden renal attacks.

TRINITROTOLUENUM
T. N. T.

Symptoms found in munition workers handling T. N. T who inhale and ingest it and also absorb some through the skin. They were compiled by Dr. Conrad Wesselhoeft and published in the December, 1926 number of the Journal of the American Institute of Homeopathy.
The destructive action of T. N. T on the red blood corpuscles is responsible for the anæmia and the jaundice with their secondary symptoms. The hemoglobin is changed so it cannot act satisfactorily as an oxygen carrier and as a result we have breathlessness, dizziness, headache, faintness, palpitation, undue fatigue, muscle cramps and cyanosis; also drowsiness, depression and insomnia. Later stages of the poisoning produce toxic jaundice and aplastic anæmia. The jaundice is the result of cellular destruction in contrast to obstructive jaundice.

TUBERCULINUM

Nucleo-protein

Nosode from Tubercular Abscess

Tuberculinum is indicated in renal affections, but caution is necessary, for where skin and intestines do not perform normally even high potencies are dangerous. In chronic cystitis, brilliant and permanent results (Dr. Nebel Montreux).

Of undoubted value in the treatment of incipient tuberculosis. Especially adapted to the light-complexioned, narrow-chested subjects. Lax fiber, low recuperative powers, and very susceptible to changes in the weather. Patient always tired; motion causes intense fatigue; aversion to work; wants constant changes. When symptoms are constantly changing and well-selected remedies fail to improve, and cold is taken from the slightest exposure. Rapid emaciation. Of great value in epilepsy, neurasthenia and in nervous children. Diarrhœa in children running for weeks, extreme wasting, bluish pallor, exhaustion. Mentally deficient children. Enlarged tonsils. Skin affections, acute articular rheumatism. Very sensitive, mentally and physically. General exhaustion. Nervous weakness. Trembling. Epilepsy. Arthritis.

Relationship.––Compare: Koch's lymph (acute and chronic parenchymatous nephritis; produces pneumonia, broncho-pneumonia, and congestion of the lungs in tuberculous patients, and is a remarkably efficacious remedy in lobular pneumonia-broncho-pneumonia); Aviare-Tuberculin from birds––(acts on the apices of the lungs; has proved an excellent remedy in influenzal bronchitis; symptoms similar to tuberculosis; relieves the debility, diminishes the cough, improves the appetite, and braces up the whole organism; acute broncho-pulmonary diseases of children; itching of palms and ears; cough, acute, inflammatory, irritating, incessant, and tickling; loss of strength and appetite); Hydrast (to fatten patients after Tuberc); Formic acid (tuberculosis, chronic nephritis, malignant tumors; pulmonary tuberculosis, not in third stage, however; lupus; carcinoma of breast and stomach; Dr. Krull uses injections of solutions corresponding to the third centesimal potency; these must not be repeated before six months). **Compare:** Bacil; Psorin; Lach. Kalagua (tuberculosis; garlicky odor of all secretions and breath). Teucrium scoradonia. **Compare:** Thuja (Vaccinosis may block the way of action of Tuberculin-until Thuja has been given and then acts brilliantly (Burnett).

Complementary: Calcarea; China; Bryon.
Dose.––Tuberculin needs more frequent repetition in children's complaints than nearly every other chronic remedy (H. Fergie Woods). Thirtieth and much higher, in infrequent doses. When Tuberculinum fails Syphilinum often follows advantageously, producing a reaction.
"The use of Tuberculinum in phthisis pulmonalis demands attention to the following points: In apyretic purely tubercular phthisis results are marked, provided the eliminative organs are in good order, but nothing below the 1000th should be used, unless absolutely necessary. With patients where streptostaphylo-pneumococci are in the bronchi; where also after washing the sputum, a pure "t b. " bacilli-mass remains, the same treatment is indicated. With mixed infection-found in the majority of cases-where the sputum swarms with virulent micro-organisms in addition to the "t b. ", other procedure is necessary. If the heart is in good shape, a single dose of Tuberculinum 1000-2000 is given, provided there are no marked indications for other remedies. With due attention to temperature and possible excretions, the dose is allowed to work until effects are no longer observed, eight days to eight weeks. Usually a syndrome then presents, permitting the accurate choice of an antipsoric Silica, Lycopodium, Phosphorus, etc. After a while the picture again darkens and now a high potency of the isopathic remedy corresponding to the most virulent and prominent micro-organism found in the sputum is given: Staphylo-Strepto-, or Pneumococcin. The accurate bacteriological analysis of the sputum is absolutely essential; the choice of the ison again clears the picture, and so, proceeding on the one side etiologically (where these isopathica have not yet been proved); on the other side symptomatically with antipsoric remedies, the disease is dominated. My own experience warns, in the case of mixed infection, against the use of Strepto-, Staphylo-, or Pneumococcin below the 500th. I use them only from 2000 to 1000, having seen terrible aggravations from the 30, 100, 200, with a lowering temperature from 104 to 96. Hence the admonition, which need not concern scoffers, but those alone who wish to avail themselves of a potent weapon. The toxins used as remedies are, like Tuberculinum, prepared from pure and virulent cultures.
And cases, seemingly condemned to speedy death, are brought in a year or two back to normal temperature, though, of course, sacrificing a large portion of lung tissue. This result is sure when the patient can and will take care of himself, where the heart has withstood the toxin and the stomach and liver are in good function. Further, climatic variations must be avoided. With the great mineral metabolism of the phthisic, diet regulation is imperative, and should be preponderately vegetable, together with the addition of physiological salts in low potency, Calcarea carb, 3x, 5x, Calcarea phos, 2x, 6x, and intercurrently according

to indications organ-remedies as Cactus Tr. 30, Chelidonium Tr. 30, Taraxacum Tr, Nasturtium Tr, Urtica urens Tr, Tussilago farfara Tr, Lysimachia numularia Tr, for short periods.
The first dose of Tuberculinum in any difficult case is, however, the most weighty prescription. The remedy should not be given without a most careful cardiac examination. As the surgeon before the anæsthetic, so must the physician know the heart before administering this drug, especially to children, and seniles-and to young seniles. He who observes this rule will have fewer clinical reproaches on his conscience. When Tuberculinum is contraindicated, recourse must be had to the nearest antipsoric.
The above caution applies also to asthma, pleuritis, peritonitis in scrofulous (tuberculous) subjects. " (Dr. Nebel Montreux)

LUFFA OPERCULATA

A communication concerning the symptomatology of Luffa operculata was made at the Congress of the International League of Homoeopathy in 1962 by Willmar Schwabe and M. Stübler. Then it was covered by O. A. Julian and others. Prior to these developments, Boericke's Materia Medica had included this under one rubric Locomotor – Body – Coldness. Its main symptomatology include lassitude and physical fatigue, frontal and occipital headache, acute or chronic inflammation of the mucous membranes in the nasal cavities, hypertrophy or atrophy of the nasal mucous membranes, hypothyroid. A proving has been published recently. This is also from the Dr. Willmar Schwabe Group. With the support from the homoeopathic division of Dr. Willmar Schwabe, Germany, called Deutsche Homöopathie-Union (DHU), a placebo controlled pathogenetic trial was conducted by David Riley to re-establish its curative efficacy in homoeopathic doses, using 12CH with 14 female and 8 male provers. Important symptoms found during proving are reported here along with old symptoms. For the complete details of the proving, readers are requested to refer the original proving.

Boericke's *Materia Medica* is widely considered the most essential reference book for practicing homoeopathists, both beginners and those more experienced. It includes verified characteristic symptoms, supplemented by lesser symptoms to provide a more complete picture to aid in remedy selection. Boericke supplemented the essential list of remedies with published clinical experience from around the world, including the Americas, Africa and Asia, and covered clinical suggestions for unproven remedies. Even today, many of the remedies in his pocket manual are not to be found anywhere else.

William Boericke (1849-1929) was a world-renown homoeopathist practicing out of San Francisco for over fifty years. He was also the University of California's first professor of Homoeopathic Materia Medica and Therapeutics, a position he held for thirty years. Eleven years after graduating from the Hahnemann Medical College in Philadelphia, he published his *Materia Medica.* This, the 9th edition, was the last to be published two years before his death.
